Project Title: Does intention to undergo screening mammography predict future screening?
Planned research population (eligibility criteria): Women, who completed the Mammogram Practices Survey, who had chest RT (>20Gy)
Proposed specific aims: 1. To examine the concordance between intention to undergo mammography (as reported on MPS) and completing mammography (as reported at FU 2007). 2. To examine subgroups (and covariates) that are related to concordance/lack of concordance btwn intentions and behaviors (for mammography)
Will the project require non-CCSS funding to complete?: No
