Project Title Chronic Pain and Psychosexual Function in Adult Survivors of Childhood Cancer

Planned research population (eligibility criteria) Our population of interest is female participants in the CCSS who participated in the Women's Emotional Well-Being-Intimacy Survey. All participants who were eligible for that survey will be eligible for the proposed study.

Proposed specific aims 1. Investigate the association between chronic pain and global psychological functioning in female survivors of childhood cancer. 2. Assess the impact of chronic pain on psychosexual functioning and evaluate whether or not global psychological distress mediates the association between chronic pain and psychosexual functioning.

Will the project require non-CCSS funding to complete? No

If yes, what would be the anticipated source(s) and timeline(s) for securing funding?

Does this project require contact of CCSS study subjects for . . .

Additional self-reported information No

Biological Samples No

Medical record data No

If yes to any of the above, please briefly describe.

What CCSS Working Group(s) would likely be involved? (Check all that apply)
